Standz by Jenx

A versatile standing system offering prone or supine standing that accommodates abducted or neutral leg positioning for children between 1 - 9 years

Always Supportive...
Inspired by the clinical benefits of abducted standing and created alongside therapists and carers all over the world ensures the perfect combination of clinical positioning with simplicity of use. Standz offers prone or supine standing and easily accommodates either abducted or neutral leg positioning for children between the ages of 1-9 years.

Leg length discrepancy is easily accommodated by the individual controls for knee and foot positioning, and all adjustments are tool free to enable quick and effective clinical postural adjustments. With an extensive range of accessories, Standz can accommodate children with a wide range of postural requirements.

**Individual Leg Abduction**
Standz offers the ability to independently adjust either leg from 0° – 30° of abduction depending on the child’s clinical needs. Simply adjusted through a wing knob, this action is quick and simple to adjust for each standing session. An incorporated angle gauge makes it easy to see the degree of abduction for each leg.

**Angle Gauges**
Built in angle gauges for frame angle and individual leg abduction - easy to read gauges enable precise positioning and allow for the correct position to be repeatedly achieved.

**Individual Leg Adjustment**
Adjustment for both knee and footplate height – ideal for accommodating leg length discrepancy. This tool free adjustment can be made in seconds and securely clamps into place using our clever clamping marquee design.

**Safety Lock**
Built in safety lock for frame angle adjustment – ideal for those busy environments where there is potential for accidental activation of an unlocked mechanism.

**Tray Holder (optional accessory)**
This clever accessory offers convenient storage when the Tray is not in use.

**Antimicrobial Covers**
As standing aids the digestive system and gravity can take its course, our covers have been designed to wipe clean, they also contain an antimicrobial agent to aid infection control.

**Tool Free Adjustments**
No more hunting for the right sized allen key, cleverly designed wing knobs offer a comfortable grip to enable effective clamping with minimal effort – meaning growth adjustments have never been easier.

**Standz Colour Options**
As standard each base comes with:

- 4 lockable swivel castors
- Tilt mechanism with foot pedal release and safety lock
- 2 leg posts clearly marked with numbers for easy positioning of leg supports
- 0° – 30° independent abduction movement of leg posts
- Individual footplates with plantar and dorsiflexion movement
- Angle gauge to read frame angle – frame angle range of 5° – 90°
- Pelvic support board and cover pad in a choice of 4 colours
- Trunk support board and cover pad in choice of 4 colours

Flat Pad Head Support
A simple yet effective head support pad for use in supine for children with reasonable head control. It can also be used in prone to extend the height of the chest pad.

Oval or Moulded PU Head Support
Simple headrest for children who require minimal head support. Comes mounted on a flexible fixing bracket.

Multigrip™ Head Support
The original and innovative Jenx Multigrip™ Head Support is available in 3 sizes for all Jenx seating systems. Provides adjustments for height, depth and angle.

Flat Shoulder Support
A simple yet effective wide pad for supporting the shoulders when using Standz in a supine position.

Rotation Control Strap
A wide support belt designed to be used to position the pelvis, trunk or both together. Threaded through the support fixings the strap can be fastened securely around the child and then be pulled to facilitate extension or rotation.

Lateral Supports with Strap
Firm lateral support pads offer stability to the trunk, pelvis or both together, and the incorporated support strap can be used to facilitate extension or rotation.

Pelvic Support Board
For use in prone positioning only, the Pelvic Support Board offers a full contact surface to facilitate the full extension of the pelvis and prevent pelvic rotation, pelvic obliquity and unwanted hip flexion.

Pelvic Support Board Upper Back Pad
Used in conjunction with the Pelvic Support Board, the back pad offers support for the child’s upper back. A head support can also be mounted to the back pad to help keep a neutral head position for those children who hyper extend their neck and head when standing in prone.

Multi-Axis Knee Supports
Use for supine standing only. For use where there is the need to accommodate fixed knee flexion.

In addition to the base you will need to add the following accessories to ensure a minimum safe configuration.

Prone – sandals, knee support, pelvic support & trunk support.
Supine – sandals, knee support, knee support straps, pelvic support, trunk support & head support.

Standard Knee Support
Individual knee supports offering the ability to accommodate knee flexion when used in supine (requires Knee Straps when used in supine). Width adjustable to correctly gutter the knee in position.

Standard Knee Strap
Intended for use in conjunction with the Standard Knee Supports, the Standard Knee Strap simply holds the knee in the desired position and prevents knee flexion from occurring.

Rotation Control Knee Straps
Intended for use in conjunction with the Standard Knee Supports the Rotation Control Knee Straps allow for a cutting of the child’s leg and allow for control of internal or external knee rotation.

Arched Foam Pad
A simple foam pad that is shaped to fit behind the knee to ensure a comfortable standing position when accommodating knee flexion.

Sandals
Available for Standz in either size 1 or 2, these Sandals ensure solid foot placement to give the foundation for effective leg positioning and safe standing. Also available with Ankle Snugs.

Tray Mounting Bracket
Required to mount the Multi-position Tray – simply slots onto the Standz base and is adjusted using simple, comfortable wing knobs. Allows for the tray to be quickly changed from supine to prone or vice-versa, with no need to remove the mounting bracket.

Multi-position Tray
Cleverly designed to be used in both prone and supine, the tray is angle adjustable to ensure the correct position in either application.

Prone Only Tray
Shorter support arms allow for unobstructed movement of legs into the abducted position.

Tray Extension Wings
Strongly recommended for use in supine and just as effective when used in prone, these wings attach to the rear of the tray to offer a support surface for the child’s elbows and prevents arms from slipping off the tray.

Tray Holder
A clever addition that offers a solution of where to store the tray when it is not being used.

Anti-tamper Conversion Kit
Allows for all wing knob adjustments to be converted to a tool fixing – ideal for environments where other children may tamper with the original wing knobs.
